

Practical 10

Aim:

To study and implement deployment of Ecommerce PWA to GitHub Pages.

Theory:

GitHub Pages

Public web pages are freely hosted and easily published. Public webpages hosted directly from your GitHub repository. Just edit, push, and your changes are live.

GitHub Pages provides the following key features:

1. Blogging with Jekyll
2. Custom URL
3. Automatic Page Generator

Reasons for favoring this over Firebase:

1. Free to use
2. Right out of github
3. Quick to set up

GitHub Pages is used by Lyft, CircleCI, and HubSpot.

GitHub Pages is listed in 775 company stacks and 4401 developer stacks.

Pros

1. Very familiar interface if you are already using GitHub for your projects.
2. Easy to set up. Just push your static website to the gh-pages branch and your website is ready.
3. Supports Jekyll out of the box.
4. Supports custom domains. Just add a file called CNAME to the root of your site, add an A record in the site's DNS configuration, and you are done.

Cons

1. The code of your website will be public, unless you pay for a private repository.
2. Currently, there is no support for HTTPS for custom domains. It's probably coming soon though.
3. Although Jekyll is supported, plug-in support is rather spotty.

Firebase

The Realtime App Platform. Firebase is a cloud service designed to power real-time, collaborative applications. Simply add the Firebase library to your application to gain access to a shared data structure; any changes you make to that data are automatically

synchronized with the Firebase cloud and with other clients within milliseconds.

Some of the features offered by Firebase are:

1. Add the Firebase library to your app and get access to a shared data structure. Any changes made to that data are automatically synchronized with the Firebase cloud and with other clients within milliseconds.
2. Firebase apps can be written entirely with client-side code, update in real-time out-of-the-box, interoperate well with existing services, scale automatically, and provide strong data security.
3. Data Accessibility- Data is stored as JSON in Firebase. Every piece of data has its own URL which can be used in Firebase's client libraries and as a REST endpoint. These URLs can also be entered into a browser to view the data and watch it update in real-time.

Reasons for favoring over GitHub Pages:

1. Realtime backend made easy
2. Fast and responsive

Instacart, 9GAG, and Twitch are some of the popular companies that use Firebase. Firebase has a broader approval, being mentioned in 1215 company stacks & 4651 developers stacks.

Pros

1. Hosted by Google. Enough said.
2. Authentication, Cloud Messaging, and a whole lot of other handy services will be available to you.
3. A real-time database will be available to you, which can store 1 GB of data.
4. You'll also have access to a blob store, which can store another 1 GB of data.
5. Support for HTTPS. A free certificate will be provisioned for your custom domain within 24 hours.

Cons

1. Only 10 GB of data transfer is allowed per month. But this is not really a big problem, if you use a CDN or AMP.
2. Command-line interface only.
3. No in-built support for any static site generator.

Link to our GitHub repository:

Pages link: p0203k.github.io

Github repo: <https://github.com/P0203K/KS>

Github Screenshot:

The screenshot shows the GitHub repository settings for 'P0203K / KS'. The 'Settings' tab is selected, and the 'GitHub Pages' section is active. The 'General' tab is also visible in the left sidebar. The 'GitHub Pages' section indicates that the site is live at <https://p0203k.github.io/KS/> and was last deployed by P0203K 4 minutes ago. The 'Build and deployment' section shows the source is 'Deploy from a branch' and the branch is 'master'. The 'Custom domain' section is also visible.

The screenshot shows the website p0203k.github.io/KS/. The page has a navigation bar with links for 'HOME', 'ABOUT US', and 'HELP'. Below the navigation bar, there is a section titled 'Hello, User!'.

Why Is Vaccination Necessary?

- Immunization saves lives:** Modern vaccines and oral drops have protected children from a wide variety of dangerous and fatal diseases. In fact, some historically prevalent diseases have now been eradicated from various countries owing to successful immunization campaigns.
- Immunization protects the next generation:** Immunization has helped rid the world of some very serious debilitating diseases. Polio, for example, has now been eradicated from the country, meaning current and future generations will never have to suffer from it.
- Immunization can help save money:** In a country like India where a large section of the population belongs to minimal income groups, supporting a family member suffering from a preventable disease can be difficult. It not only consumes all financial savings but at times, pushes families towards financial instability. The family member who is assigned the role of taking care of the sick often finds themselves unable to participate in economic activities and contribute to the income of the family. All of this can be avoided by taking the correct vaccine at the
